

Reddit Package

Reddit is a social news aggregation, web content rating, and discussion website.

- Domain: reddit.com
- Credentials: appClientId, appClientSecret

How to get credentials:

1. [Sign up or Log in](#) on reddit.com
2. On page [preferences/apps](#) create an app.
3. Fill all required fields and click create app.
4. In our package we using OAuth authentication, more details about how it work in Reddit you can read [HERE](#).
5. To get access token, which used in all blocks of package as required field, first of all you need redirect the user to this URL:
 - https://www.reddit.com/api/v1/authorize?client_id={CLIENT_ID}&response_type={TYPE}&state={RANDOM_STRING}&redirect_uri={URI}&duration={DURATION}&scope={SCOPE_STRING}
 - About link syntax you can read [HERE](#)
1. In redirect link, one of parameter will be "code", which we will use next.
2. Finally to get access token use "getAccessToken" block in this package.

Custom datatypes:

Datatype	Description	Example
Datpicker	String which includes date and time	2016-05-28 00:00:00
Map	String which includes latitude and longitude coma separated	50.37, 26.56
List	Simple array	["123", "sample"]
Select	String with predefined values	sample
Array	Array of objects	[{"Second name": "123", "Age": "12", "Photo": "sdf", "Draft": "sdfsdf"}, {"name": "adi", "Second name": "bla", "Age": "4", "Photo": "asfse rwe", "Draft": "sdfsdf"}]

Reddit.getAccessToken

Get access token from code provided in the redirect described.

Field	Type	Description
appId	credentials	Id of your app.
appSecret	credentials	Secret of your app.
code	String	A one-time use code that may be exchanged for a bearer token.
redirectUri	String	Redirect Uri from your app settings.

Reddit.refreshAccessToken

Refresh access token.

Field	Type	Description
appId	credentials	Id of your app.
appSecret	credentials	Secret of your app.
refreshToken	String	The refresh token retrieved during the initial request for an access token.

Reddit.revokeAccessToken

Manually revoking a token.

Field	Type	Description
appClientId	credentials	Id of your app.
appClientSecret	credentials	Secret of your app.
token	String	The access token or refresh token that the client wishes to revoke.
tokenTypeHint	Select	The type of token being revoked (<i>refreshtoken</i> or <i>accesstoken</i>).

Reddit.getMe

Gets information about the current user's account.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.getMyBlockedUsers

Gets a list of the current user's blocked users.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.
show	String	(optional) the string all.

Reddit.getMyFriends

Gets a list of the current user's friends.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.
show	String	(optional) the string all.

Reddit.getMyKarmaBreakdown

Gets karma breakdown of current user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.getMyPrefs

Gets current user's site preferences.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.getMyTrophies

Gets current user's trophies.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.clearFlairTemplates

Deletes all flair templates of the selected type from the selected subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of flairs to clear.
flairType	Select	One of (<i>USERFLAIR</i> , <i>LINKFLAIR</i>).

Reddit.deleteUserFlair

Deletes a user's flair from the specified subreddit.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to delete user flair.
name	String	Username of user whose flair to delete.

Reddit.deleteFlairTemplate

Deletes the selected flair template from the specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit from which to delete flair template.
flairTemplateId	String	ID of template to delete.

Reddit.assignUserFlair

Assigns the selected user custom flair text and CSS class in the specified subreddit. Mods only.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to assign flair.
name	String	Username of user to assign flair.
text	String	Custom flair text (no longer than 64 characters).
link	String	A fullname of a link.
cssClass	String	A valid subreddit image name.

Reddit.configureSubredditFlair

Updates all options in a subreddit's flair configuration.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to configure flair.
flairEnabled	Boolean	Whether or not user flair is displayed.
flairPosition	Select	On which side to display user flair. One of 'left' or 'right'.
flairSelfAssignEnabled	Boolean	Whether or not users can select their own user flair.
linkFlairPosition	Select	On which side to display links' flair. One of 'left', 'right', or 'none'.
linkFlairSelfAssignEnabled	Boolean	Whether or not users can select their own links' flair.

Reddit.getUserFlairList

Retrieves a list of all assigned user flair in the specified subreddit. Must be a mod of that subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Name of subreddit from which to retrieve flair list.
name	String	A user by name.
limit	Number	Upper limit of number of items to retrieve. Maximum is 1000.
after	String	Use 'next' attribute of previous call to retrieve next page.
before	String	Retrieve only flairs that are higher than this user ID on the list.

Reddit.getUserFlairSelector

Gets current flair and a list of possible flairs for the specified user in the specified subreddit. Also useful for obtaining flair ID's.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to view flair options.
link	String	A fullname of a link.
name	String	Username for whom to view selection. Defaults to current user.

Reddit.addFlairTemplate

Adds or modifies a flair template in a subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Name of subreddit to add flair template.
apiType	String	Specifies user or link flair template. One of 'link' or 'user'.
text	String	Flair text (no longer than 64 characters).
flairTemplateId	String	The template ID of an existing flair to modify. If null, will add a new one.
cssClass	String	Flair CSS class.
textEditable	Boolean	Whether or not to allow users to edit the flair's text when assigning it.

Reddit.selectUserFlair

Selects a user flair to use from the flair selection list.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to select flair.
name	String	Username of user to whom to apply flair.
flairTemplateId	String	Template ID of template to select. Null will remove the user's flair.
text	String	Modified flair text, if allowed (no longer than 64 characters).

Reddit.showMyFlair

Selects whether or not to show the current user's flair in the selected subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to enable or disable flair.
flairEnabled	Boolean	True to show flair. False to hide flair.

Example of success response

```
{
  "json": {
    "errors": []
  }
}
```

Reddit.gild

Gild a link or comment, which gives the author reddit gold. Must have sufficient gold credits. Reddit's documentation is odd, indicating that the thing ID is required both in the URL and the POST parameters.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
fullname	String	Fullname of a thing.

Reddit.giveGold

Give the specified user the specified months of reddit gold. Must have sufficient gold credits. Reddit's documentation is odd, indicating that the username is required both in the URL and the POST parameters.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user to whom to give gold.
months	Number	Number of months to give reddit gold (between 1 and 36).

Reddit.createComment

Submit a new comment or reply to a message..

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thingId	String	Thing ID of parent object on which to comment. Could be link, text post, or comment.
text	String	Comment, raw markdown text.

Reddit.delete

Deletes a post or comment.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to delete. Could be link, text post, or comment.

Reddit.editText

Edits the text of a comment or text post.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thingId	String	Thing ID of text object to edit. Could be text post or comment.
text	String	New text to replace the old (raw markdown).

Reddit.hidePost

Hides a post from user's listings.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	List	List of link fullnames.

Reddit.getInfo

Gives a listing of information on objects.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	List	List of thing.
url	String	A valid URL.

Reddit.lockThread

Lock a post and prevent any new comments by non-moderators.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of post to lock. Must be a post, not a comment.

Reddit.markNSFW

Marks a post as NSFW.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of post to mark as NSFW.

Reddit.getCommentChildren

Get comments in a tree that are hidden by "load more comments". NOTE: Only make one request for this at a time. Higher concurrency will result in an error.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
linkId	String	Fullname (thing ID) of link/post of the comment tree.
children	List	List of comment ID36s for which to retrieve children.
sort	Select	One of (confidence, top, new, controversial, old, random, qa, live).
id	String	Id of the associated MoreChildren object.

Reddit.report

Report a link, comment or message.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thingId	String	Thing ID of object to report.
reason	String	The reason for the report. Must be <100 characters.
otherReason	String	The other reason for the report. Must be <100 characters.
siteReason	String	The site reason for the report. Must be <100 characters.

Reddit.save

Save a link or comment. Saved things are kept in the user's saved listing for later perusal.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to save. Can be post or comment.
category	String	Category in which to save object. Defaults to none.

Reddit.getSavedCategories

Get a list of categories in which things are currently saved.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.sendInboxReplies

Toggles whether or not the current user should receive replies to a specific post or comment to their inbox.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to toggle.
state	Boolean	State of inbox replies. True to receive, false for not.

Reddit.setContestMode

Toggles contest mode on a post.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of post to toggle contest mode.
state	Boolean	True to enable contest mode, false to disable.

Reddit.stickyPost

Stickies a post at the top of the subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of post to sticky.
num	Select	Position of new sticky. 1 for top, 2 for bottom. Defaults to 2.
state	Boolean	State boolean value.

Reddit.setSuggestedSort

Sets the default sort of a link's comments.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thing	String	Thing ID of link to set suggested sort.
sort	Select	Sort method. One of: 'confidence', 'top', 'new', 'hot', 'controversial', 'old', 'random', 'qa'

Reddit.createPost

Create new post.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
sr	String	Subreddit in which to post link.
title	String	Title of the submission. up to 300 characters long.
text	String	Raw markdown text of the submission.
url	String	Link to post.
sendreplies	Boolean	Send comment replies to the current user's inbox. True to enable, false to disable.
kind	Select	One of (link, self, image).
resubmit	Boolean	Boolean value.
extension	String	Extension used for redirects.
g-recaptcha-response	String	Recaptcha response.
app	String	App.

Reddit.unhidePost

Unhides a post from user's hidden posts.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	List	List of link fullnames to unhide.

Reddit.unlockThread

Unlock a post and allow any new comments.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of post to unlock.

Reddit.unmarkNSFW

Unmarks a post as NSFW.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of post to unmark as NSFW.

Reddit.unsave

Unsave a post or comment from the current user's saved posts.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to unsave. Can be post or comment.

Reddit.upVote

Cast a vote on a thing.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to upvote.
rank	Number	Upvote rank, an integer greater than 1.

Reddit.downVote

Downvotes a post or comment.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to downvote.
rank	Number	Downvote rank, an integer greater than 1.

Reddit.unVote

Resets the current user's vote on a post or comment.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to unvote.
rank	Number	Unvote rank, an integer greater than 1.

Reddit.getLinksById

Retrieves a listing of links by their specified thing ID.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
names	List	List thing ID's of links to retrieve.

Reddit.getComments

Retrieves a listing of comments and children for a link and optionally a specific comment

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to assign comments.
article	String	ID of link, without prefix, for comments fetch.
comment	String	Optional, ID36 or fullname of a single comment to fetch with children, much like permalink.
context	Number	Number of levels up of parent comments to retrieve. Only applicable to child comments (between 0 and 8).
depth	Number	Depth of child comments to retrieve.
limit	Number	Limit of comments to retrieve.
sort	Select	How to sort the comments, one of 'confidence', 'top', 'new', 'hot', 'controversial', 'old', 'random', 'qa'
showedits	Boolean	Show edited comments, perhaps? Not well documented by reddit.
showmore	Boolean	Include links to show more comments, maybe? Not well documented by reddit.
srDetail	String	Expand subreddits.

Reddit.getDuplicateLinks

Retrieves the specified link and a listing of other links that are to duplicate destinations.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
article	String	ID of link, without prefix, to check for duplicates.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
limit	Number	Limit of duplicate links to retrieve (default: 25, maximum: 100).
count	Number	A positive integer (default: 0).
srDetail	String	Expand subreddits.
show	String	(optional) the string all.

Reddit.getHot

Retrieves the hot listing for the optionally specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of listing to retrieve. If none, defaults to front page.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
count	Number	A positive integer (default: 0).
srDetail	String	Expand subreddits.
show	String	(optional) the string all.

Reddit.getControversial

Retrieves the controversial listing for the optionally specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of listing to retrieve. If none, defaults to front page.
t	Select	Time constraint for age of items on list. One of hour, day, week, month, year, all.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.
show	String	(optional) the string all.

Reddit.getNew

Retrieves the new listing for the optionally specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of listing to retrieve. If none, defaults to front page.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.

Reddit.getRandom

Retrieves a random link from the optionally specified subreddit. If none, choose from any subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit from which to retrieve a random link.

Reddit.getTop

Retrieves the top listing for the optionally specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of listing to retrieve. If none, defaults to front page.
t	Select	Time constraint for age of items on list. One of 'hour', 'day', 'week', 'month', 'year', 'all'.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.

Reddit.getRising

Retrieves the rising listing for the optionally specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of listing to retrieve. If none, defaults to front page.
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.

Reddit.checkNeedsCaptcha

Check whether ReCAPTCHAs are needed for API methods.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.getLiveThread

Get a listing of live events by id.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
names	List	List of ids.

Reddit.createLiveThread

Creates a new live thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
title	String	The thread's title (no longer than 120 characters).
description	String	The thread's description (raw markdown text).
resources	String	The thread's resources section in the sidebar (raw markdown text).
nsfw	Boolean	Whether or not the thread is NSFW. Prompts guests to continue when visiting.

Reddit.getCurrentlyFeaturedLiveThread

Get some basic information about the currently featured live thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.acceptInvitationToThread

Accept a pending invitation to contribute to the thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.

Reddit.closeThread

Permanently close the thread, disallowing future updates.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.

Reddit.deleteUpdateFromThread

Delete an update from the thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
id	String	the ID of a single update. e.g. LiveUpdate_ff87068e-a126-11e3-9f93-12313b0b3603.

Reddit.editThread

Configure the thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
title	String	The thread's title (no longer than 120 characters).
description	String	The thread's description (raw markdown text).
resources	String	The thread's resources section in the sidebar (raw markdown text).
nsfw	Boolean	Whether or not the thread is NSFW. Prompts guests to continue when visiting.

Reddit.inviteContributerToThread

Invite another user to contribute to the thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
name	String	The the name of an existing user.
permissions	String	Permission description e.g. +update,+edit,-manage.
type	Select	One of (liveupdatecontributorinvite, liveupdate_contributor).

Reddit.leaveContributerFromThread

Abdicate contributorship of the thread.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.

Reddit.reportThread

Report the thread for violating the rules of reddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
type	Select	One of (spam, vote-manipulation, personal-information, sexualizing-minors, site-breaking).

Reddit.revokeUserContributorship

Revoke another user's contributorship.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
id	String	Fullname of a account.

Reddit.revokeContributorInvite

Revoke an outstanding contributor invite.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
id	String	Fullname of a account.

Reddit.changeContributorPermissions

Change a contributor or contributor invite's permissions.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
name	String	The the name of an existing user.
permissions	String	Permission description e.g. +update,+edit,-manage.
type	Select	One of (liveupdatecontributorinvite, liveupdate_contributor).

Reddit.postUpdateToThread

Post an update to the thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
body	String	Raw markdown text.

Reddit.getThreadUpdates

Get a list of updates posted in this thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
after	String	The ID of a single update. e.g. LiveUpdate_ff87068e-a126-11e3-9f93-12313b0b3603.
before	String	The ID of a single update. e.g. LiveUpdate_ff87068e-a126-11e3-9f93-12313b0b3603.
count	Number	A positive integer (default: 0).
limit	Number	The maximum number of items desired (default: 25, maximum: 100).
stylesr	String	Subreddit name.
isEmbed	Boolean	Is embed, internal use only.

Reddit.getThreadContributors

Get a list of users that contribute to this thread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.

Reddit.getThreadSubmissions

Get a list of reddit submissions linking to this thread.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
thread	String	The thread's name.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	The maximum number of items desired (default: 25, maximum: 100).
srDetail	String	Expand subreddits.

Reddit.collapseMessage

Collapse one or more messages in modmail.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	List	List of ID's of messages to collapse.

Reddit.composeMessage

Sends a message to a user or subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
to	String	Username or subreddit to send to.
subject	String	Subject of message (no longer than 100 characters).
text	String	Body of message (raw markdown text).
fromSr	String	Optionally the name of the subreddit from which to send the message.
g-recaptcha-response	String	Recaptcha response.

Reddit.deleteMessage

Deletes a message from the recipient's inbox. Be aware that messages sent both from and to yourself cannot be deleted.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	String Thing ID of message to delete.

Reddit.markAllMessagesAsRead

Queues a job for all of your messages to be marked as read.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.

Reddit.markMessageRead

Marks one or more messages as read.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	List	List of one or more message thing ID's (t4_).

Reddit.unblockSubredditByMessage

Unblock a subreddit using a message they sent you.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of a message sent by the subreddit to unblock.

Reddit.uncollapseMessage

Uncollapse one or more messages in modmail.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
id	List	List of messages ID's to uncollapse.

Reddit.markMessageUnread

Marks one or more messages as unread.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	List	List of one or more message thing ID's (t4_).

Reddit.getInbox

Retrieves the current user's personal message inbox.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
mark	Boolean	One of (true, false).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of the number of links to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.

Reddit.getUnread

Retrieves the current user's unread personal messages.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
mark	Boolean	One of (true, false).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of the number of links to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.

Reddit.getSent

Retrieves the current user's sent personal messages.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
mark	Boolean	One of (true, false).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of the number of links to retrieve. Maximum is 100.
srDetail	String	Expand subreddits.

Reddit.getUserUpvoted

Obtain posts and comments upvoted by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUserDownvoted

Obtain posts and comments downvoted by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUserComments

Obtain only comments made by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUserSubmitted

Obtain only posts made by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUserGildingsGiven

Obtain posts and comments gilded (given) by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUserGildingsReceived

Obtain posts and comments gilded (received) by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUserSaved

Obtain posts and comments saved by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUserHidden

Obtain posts and comments hidden by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records. Defaults to the current user.
show	String	One of (given).
sort	Select	One of (hot, new, top, controversial).
t	Select	One of (hour, day, week, month, year, all).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.searchSubredditsByName

List subreddit names that begin with a query string.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
query	String	Search for subreddits that start with this. Maximum 50 characters, all printable.
includeOver18	Boolean	Include subreddits that are set as NSFW (over_18).
exact	Boolean	Only return exact match.
includeUnadvertisable	Boolean	Only return subreddits that have <i>hideads</i> set to <i>True</i> or are on the <i>antiads_subreddits</i> list.

Reddit.getRecommendedSubreddits

Retrieve a list of recommended subreddits based on the names of existing ones.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
srnames	List	List of subreddits on which to base recommendations.
omit	List	Omit these specific subreddits from results (List of subreddit names).
over18	Boolean	Include subreddits that are set as NSFW (over_18).

Reddit.deleteSubredditImage

Remove an image from the subreddit's custom image set.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit from which to remove the image.
imageName	String	The name of the image to delete.

Reddit.getWikiContributors

Retrieve a list of approved wiki contributors from the specified subreddit. Must be a mod or approved wiki contributor in subreddit. Using pagination will result in the last item of the previous page appearing as the first item of the next page.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve approved wiki contributors.
user	String	Jump to a specific user. Will return an empty list if user is not on list.
show	String	One of (given).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getContributors

Retrieve a list of approved submitters from the specified subreddit. Must be a mod or approved submitter in subreddit. Using pagination will result in the last item of the previous page appearing as the first item of the next page.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve approved wiki contributors.
user	String	Jump to a specific user. Will return an empty list if user is not on list.
show	String	One of (given).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getWikiBanned

Retrieve a list of wiki banned users from the specified subreddit. Must be a mod with access permissions. Using pagination will result in the last item of the previous page appearing as the first item of the next page.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve wiki banned.
user	String	Jump to a specific user. Will return an empty list if user is not on list.
show	String	One of (given).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getModerators

Retrieve a list of moderators from the specified subreddit. Must have read access to subreddit. This function does not use pagination, but it's here anyway in case that's changed in the future.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve moderators.
user	String	Jump to a specific user. Will return an empty list if user is not on list.
show	String	One of (given).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getMuted

Retrieve a list of muted users from the specified subreddit. Must be a mod with access permissions. Using pagination will result in the last item of the previous page appearing as the first item of the next page.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve mute.
user	String	Jump to a specific user. Will return an empty list if user is not on list.
show	String	One of (given).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getBanned

Retrieve a list of banned users from the specified subreddit. Must be a mod with access permissions. Using pagination will result in the last item of the previous page appearing as the first item of the next page.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve banned.
user	String	Jump to a specific user. Will return an empty list if user is not on list.
show	String	One of (given).
after	String	Get items lower on list than this entry. Does not mean chronologically.
before	String	Get items higher on list than this entry. Does not mean chronologically.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.aboutSubreddit

Retrieves information about the specified subreddit, including subreddit ID.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve information.

Reddit.deleteSubredditIcon

Remove the subreddit's custom mobile icon.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit from which to remove the icon.

Reddit.deleteSubredditHeaderImage

Remove the subreddit's custom header image.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit from which to remove the header image.

Reddit.deleteSubredditBanner

Remove the subreddit's custom mobile banner.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit from which to remove the banner.

Reddit.unblockUser

Unblock a user by username.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
name	String	Username of user to unblock.

Reddit.removeFriend

Removes the specified user as a friend.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Username of user to remove.

Reddit.addFriend

Adds the specified user as a friend.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
name	String	Username of friend to add.
note	String	Note to add to friend record. Currently only available to those with reddit gold.

Reddit.search

Perform a search query. Somewhat untested due to the complexity of and possible combinations to use in the search function.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
q	String	Query of which to search.
subreddit	String	Subreddit to which to restrict search.
sort	Select	Sort results by one of 'relevance', 'hot', 'top', 'new', 'comments'. Defaults to 'relevance'.
t	Select	One of 'hour', 'day', 'week', 'month', 'year', 'all'. Defaults to all.
type	List	List of result types: 'sr', 'link', or null.
includeFacets	Boolean	Include facets.
restrictSr	Boolean	Restrict subreddit.
syntax	Select	One of (cloudsearch, lucene, plain).
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	The maximum number of items desired (default: 25, maximum: 100).
srDetail	String	Expand subreddits (optional).

Reddit.usernameAvailable

Presumably checks whether the specified username is available, but endpoint is not working at this time.

Field	Type	Description
user	String	Username to check for availability.

Reddit.multiGetDescription

Get a multi's description.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.

Reddit.multiEdit

Create or update a multireddit.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.
displayName	String	A string no longer than 50 characters.
descriptionMd	String	Multireddit sidebar text (raw markdown text).
iconName	Select	One of('art and design', 'ask', 'books', 'business', 'cars', 'comics', 'cute animals', 'diy', 'entertainment', 'food and drink', 'funny', 'games', 'grooming', 'health', 'life advice', 'military', 'models pinup', 'music', 'news', 'philosophy', 'pictures and gifs', 'science', 'shopping', 'sports', 'style', 'tech', 'travel', 'unusual stories', 'video', '', 'None').
keyColor	String	A 6 - digit rgb hex color, e.g. '#AABBCC'.
subredditsName	List	List of subreddits name.
visibility	Select	One of 'public', 'private', 'hidden'. Hidden multireddits will not be visible to you except through the API.
weightingScheme	Select	One of 'classic', 'fresh'.
expandSrs	Boolean	Expand subreddits.

apiEco.ir

The first Iranian API market

Reddit.multiAddSubreddit

Add the specified subreddit to the specified multireddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.
subredditName	String	Name of subreddit to add.

Reddit.multiGetSubreddit

Get information about the specified subreddit in the specified multireddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.
subredditName	String	Subreddit for which to obtain information.

Reddit.multiRemoveSubreddit

Remove the specified subreddit from the specified multireddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.
subredditName	String	Name of subreddit to remove.

Reddit.multiEditDescription

Edit the description/sidebar for the specified multireddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.
modelBodyMd	String	New description (raw markdown text).

Reddit.getUserOverview

Obtain posts and comments made by the specified user.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for whom to retrieve records.
sort	Select	Sorting method. One of 'hot', 'new', 'top', 'controversial', or null.
show	String	One of (given).
t	Select	One of 'hour', 'day', 'week', 'month', 'year', 'all', or null.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getUser

Retrieve information about the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user to retrieve.

Reddit.getUserTrophies

Get a user's trophies.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Username of user for whom to retrieve trophies.

Reddit.multiGet

Fetch a multi's data and subreddit list by name.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.
expandSrs	Boolean	Expand subreddits.

Reddit.searchSubreddits

Search for subreddits by title and description.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
q	String	Query with which to search
sort	Select	Sorting method. One of 'relevance', 'activity'
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.leaveModerator

Abdicate moderator status in a subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Name of subreddit to leave.

Reddit.getStickies

Retrieve a subreddit's stickied posts.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit from which to retrieve sticky posts.
num	Select	Argument can be used to select a specific sticky (an integer between 1 and 2 (default: 1)).

Reddit.leaveContributor

Abdicate approved submitter status in a subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Name of subreddit to leave.

Reddit.multiDelete

Deletes the specified multireddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.

Reddit.multiGetUser

Retrieves a list of multireddits owned by the specified user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
username	String	Username of user for which to retrieve owned multireddits.
expandSrs	Boolean	Obtain extra details about the subreddits of each multireddit.

Reddit.ignoreReports

Ignores reports for the specified thing.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to be ignored.

Reddit.multiRename

Renames a multireddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
displayName	String	A string no longer than 50 characters.
multiredditOwner	String	Username of multireddit owner.
from	String	Name of multireddit to rename.
to	String	Destination name.

Reddit.unmuteUserByMessage

Unmute a user from a subreddit based on the thing ID of a message they sent.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of the message author to be unmuted.

Reddit.getPopularSubreddits

Retrieves a list of popular subreddits.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getMyModeratedSubreddits

Retrieve a list of the current user's subreddits in which they are a moderator.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.unignoreReports

Allow future reports on a thing to cause notifications.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to be unignored.

Reddit.remove

Remove a link, comment, or modmail message.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to remove.
spam	Boolean	Mark as spam.

Reddit.getMyContributedSubreddits

Retrieve a list of the current user's subreddits in which they are an approved submitter.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getMySubscribedSubreddits

Retrieve a list of the current user's subscribed subreddits.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.multiCreate

Create a multi. Responds with 409 Conflict if it already exists.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multireddit	String	Multireddit name.
multiredditOwner	String	Username of multireddit owner.
displayName	String	A string no longer than 50 characters.
descriptionMd	String	Multireddit sidebar text (raw markdown text).
iconName	Select	One of('art and design', 'ask', 'books', 'business', 'cars', 'comics', 'cute animals', 'diy', 'entertainment', 'food and drink', 'funny', 'games', 'grooming', 'health', 'life advice', 'military', 'models pinup', 'music', 'news', 'philosophy', 'pictures and gifs', 'science', 'shopping', 'sports', 'style', 'tech', 'travel', 'unusual stories', 'video', '', 'None').
keyColor	String	A 6 - digit rgb hex color, e.g. '#AABBCC'.
subredditsName	List	List of subreddits name.
visibility	Select	One of 'public', 'private', 'hidden'. Hidden multireddits will not be visible to you except through the API.
weightingScheme	Select	One of 'classic', 'fresh'.
expandSrs	Boolean	Expand subreddits.

Reddit.muteUserByMessage

Mute a user from a subreddit based on the thing ID of a message they sent.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of the message author to be muted.

Reddit.multiGetMine

Retrieves a list of multireddits that are owned by the current user.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
expandSrs	Boolean	Expand subreddits.

Reddit.multiCopy

Copy an existing multireddit to your own set.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
multiredditOwner	String	Username of multireddit owner.
from	String	Name of multireddit to copy.
to	String	Name of destination multireddit.
displayName	String	A string no longer than 50 characters.

Reddit.editSubreddit

Change a subreddit's configuration.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
name	String	Subreddit name.
publicDescription	String	Public description (raw markdown text).
description	String	Raw markdown text.
title	String	A string no longer than 100 characters.
header-title	String	A string no longer than 500 characters.
sr	String	Name of subreddit to change.
themeSr	String	Subreddit name.
lang	String	A valid IETF language tag (underscore separated).
commentScoreHideMins	Number	An integer between 0 and 1440 (default: 0).
excludeBannedModqueue	Boolean	Exclude banned modqueue, boolean value.
submitLinkLabel	String	A string no longer than 60 characters.
submitText	String	Raw markdown text.
submitTextLabel	String	A string no longer than 60 characters.
suggestedCommentSort	Select	One of (confidence, top, new, controversial, old, random, qa, live).
linkType	Select	One of (any, link, self).
spamComments	Select	One of (low, high, all).
spamLinks	Select	One of (low, high, all).

Field	Type	Description
spamSelfposts	Select	One of (low, high, all).
spoilersEnabled	Boolean	Spoilers enabled, boolean value.
type	Select	One of (<i>goldrestricted</i> , <i>archived</i> , <i>restricted</i> , <i>goldonly</i> , <i>employees_only</i> , <i>private</i> , <i>public</i>).
wikiEditAge	Number	An integer greater than 0 (default: 0).
wikiEditKarma	Number	An integer greater than 0 (default: 0).
wikimode	Select	One of (disabled, modonly, anyone).
allowImages	Boolean	Allow images, boolean value.
allowTop	Boolean	Allow top, boolean value.
hideAds	Boolean	Hide ads, boolean value.
over18	Boolean	Is over 18, boolean value.
publicTraffic	Boolean	Public traffic, boolean value.
showMedia	Boolean	Show media, boolean value.
showMediaPreview	Boolean	Show media preview, boolean value.
collapseDeleted Comments	Boolean	Collapse deleted comments, boolean value.
themeSrUpdate	Boolean	Theme subreddit update, boolean value.
g-recaptcha-response	String	Recaptcha response.

Reddit.getDefaultSubreddits

Retrieves a list of default subreddits.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getGoldOnlySubreddits

Retrieves a list of gold-only subreddits.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getNewSubreddits

Retrieves a list of new subreddits.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.getSubredditSidebar

Get a subreddit's sidebar contents.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of which to retrieve sidebar.

Reddit.getSubredditSettings

Retrieve a list of the subreddit's settings. Must be a moderator.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	The subreddit to retrieve.

Reddit.getModerationLog

Retrieves recent entries from the moderation log for the specified subreddit.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of log to retrieve. All moderated subreddits by default.
mod	String	Filter by moderator.
type	Select	Filter by mod action, one of (banuser, unbanuser, removelink, approvelink, removecomment, approvecomment, addmoderator, invitemoderator, uninvitemoderator, acceptmoderatorinvite, removemoderator, addcontributor, removecontributor, editsettings, editflair, distinguish, marknsfw, wikibanned, wikicontributor, wikiunbanned, wikipagelisted, removewikicontributor, wikirevise, wikipermlevel, ignorereports, unignorereports, setpermissions, setsuggestedsort, sticky, unsticky, setcontestmode, unsetcontestmode, lock, unlock, muteuser, unmuteuser, createrule, editrule, deleterule, spoiler, unspoiler, modmail_enrollment).
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.searchSubredditsByTopic

Search for subreddits by topic keywords.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
query	String	Query with which to search.

Reddit.setSubredditStylesheet

Set a subreddit's stylesheet.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of which to set stylesheet.
stylesheetContents	String	Contents of stylesheet, probably pretty long.
reason	String	Since the stylesheet is a wiki page, optionally provide a reason for editing.

Reddit.getSubmitText

Retrieves the "submitting to /r/&subreddit" text for the selected subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Name of subreddit from which to obtain submit text.

Reddit.createSubreddit

Create a new subreddit.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
sr	String	Name of subreddit to change.
name	String	Subreddit name.
publicDescription	String	Public description (raw markdown text).
description	String	Raw markdown text.
title	String	A string no longer than 100 characters.
header-title	String	A string no longer than 500 characters.
themeSr	String	Subreddit name.
lang	String	A valid IETF language tag (underscore separated).
commentScoreHideMins	Number	An integer between 0 and 1440 (default: 0).
excludeBannedModqueue	Boolean	Exclude banned modqueue, boolean value.

imageType	Select	One of 'png' or 'jpg'.

Reddit.distinguish

Mod distinguish a post or comment.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to distinguish.
how	Boolean	True to set [M] distinguish. False to undistinguish.

Reddit.approve

Marks the specified thing as approved.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
id	String	Thing ID of object to be approved.

Reddit.acceptModeratorInvite

Accepts a moderator invitation for the specified subreddit. You must have a pending invitation for that subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit to accept invitation.

Reddit.getUnmoderated

Retrieves a list of things that have not been moderated in the specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of items to retrieve. All moderated subreddits by default.
only	Select	One of (links, comments).
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.wikiAllowEditor

Allow the specified user to edit the specified wiki page.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of the wiki page.
username	String	Username of user to allow.
page	String	Name of page to allow user to edit.

Reddit.wikiDisallowEditor

Remove the specified user from the allowed editors list of the specified wiki page.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of the wiki page.
username	String	Username of user to allow.
page	String	Name of page to disallow user to edit.

Reddit.wikiGetPages

Retrieves a list of all pages of the specified subreddit's wiki.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve pages.

Reddit.wikiGetPage

Retrieves the specified wiki page, optionally at a specific revision or a comparison between revisions.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to retrieve page.
page	String	Page to retrieve.
v	String	Specific revision ID to retrieve (optional).
v2	String	ID of revision with which to compare &v (optional2).

Reddit.wikiGetRevisions

Retrieves a listing of wiki revisions for all pages within the specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve revisions.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.wikiGetPageRevisions

Retrieves a listing of wiki revisions for the specified page within the specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit for which to retrieve revisions.
page	String	Page for which to retrieve revisions.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.wikiEditPage

Edit a wiki page.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit in which to edit page.
page	String	Page to edit.
content	String	Content with which to overwrite page.
reason	String	Reason for revision (up to 256 characters long).
previous	String	Revision ID on which to base this edit.

Reddit.wikiToggleHideRevision

Toggle a revision's status of hidden.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of revision.
page	String	Pagename of revision.
revision	String	ID of revision to toggle hidden status.

Reddit.wikiRevertToRevision

Revert a wiki page to a previous revision.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of revision.
page	String	Pagename of revision.
revision	String	ID of revision to which to revert.

Reddit.wikiGetPageDiscussions

Retrieves a listing of discussions about a certain wiki page.

Field	Type	Description
appClientId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of page.
page	String	Page for which to retrieve discussions.
after	String	Fullname of a thing.
before	String	Fullname of a thing.
count	Number	A positive integer (default: 0).
limit	Number	Upper limit of number of items to retrieve. Maximum is 100.
srDetail	String	Expand subreddits (optional).

Reddit.wikiGetPageSettings

Get the specified page's settings in the specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of page.
page	String	Name of page.

Reddit.wikiUpdatePageSettings

Update the specified page's settings in the specified subreddit.

Field	Type	Description
appId	credentials	Id of your app.
accessToken	String	Access token.
subreddit	String	Subreddit of page.
page	String	Name of page.
permlevel	Number	Permissions level for page. 0 for use subreddit wiki permissions, 1 for only approved editors, 2 for only mods, null to not update.
listed	Boolean	Show this page on the list of wiki pages. True to show, false to hide, null to not update.
